Type 700
Precision Air Pressure Regulator
For applications that require accurate pressure control

The Type 700 is designed to provide high flow capacity and accurate process control. A poppet valve balanced by a rolling diaphragm insures a constant output pressure even during wide supply pressure variations. Stability of regulated pressure is maintained under varying flow conditions through the use of an aspirator tube which adjusts the air supply in accordance with the flow velocity.

Features

- **1/4″, 3/8″, 1/2″ NPT/BSP Porting**
- **High Flow Capacity**
  Allows flows up to 80 scfm (2,264 Nl/min)
- **Sensitive**
  Senses output pressure deviations to within 1/8 inch water column pressure
- **Stable Output**
  Dampening action of aspirator tube makes this regulator insensitive to changes in flow
- **On-line Maintenance**
  Can be serviced without removal from air line
