KIRAY 300

Infrared thermometer

Supplied with thermocouple K probe

Infrared thermometer Kiray 300 is a thermometer used to diagnose, inspect and check any temperature. Thanks to its elaborated optical system with a dual laser sighting, it allows easy and accurate measurements of little distant targets. The KIRAY 300 instrument has an internal memory which can save up to 100 measurements. Compatible with thermocouple K probe.

This device meets with following standards' requirements: EN 61326-1: 2013 and EN 61326-2: 2013

Infrared thermometer, how does it work?

Infrared thermometers can measure the surface temperature of an object. Its optic lens catches the energy emitted and reflected by the object. This energy is collected and focused onto a detector. This information is displayed as temperature. The laser pointer is only used to aim at the target.
