

Pressure transmitter COMPACT ECONomic for diaphragm seal operation Type series CA1110

Application area

- Pharmaceutical industry
- Food industry
- Biotechnology

Features

- Digitale pressure transmitter
- Hygienic design according to EHEDG, selected process connections with EHEDG certificate
- Case and wetted parts of stainless steel, degree of protection IP 65
- Measuring ranges
 - 0...1 bar up to 0...40 bar
 - -1...0 bar up to -1...15 bar
- Output signal 4...20 mA, 2-wire technology
- Accuracy $\leq 0.5\%$
- Easy zero point correction using a magnet
- Media temperature 140 °C

Options

- Approvals/Certificates
 - Material certificate as per EN 10204-3.1
 - Roughness height rating with inspection certificate acc. to EN 10204-3.1
- As per UKCA regulations
- Output signal (invers) 20...4 mA
- Accuracy $\leq 0.3\%$
- Hygienic design
- Wetted parts electropolished

Application

The pressure transmitter COMPACT ECONomic is suitable for measuring the relative and absolute pressure of gases, vapors and liquids.

Technical data

Constructional design / case

Design:	Hygienic case with high moisture protection
Material:	Stainless steel mat.-no. 1.4301 (304)
Degree of protection per EN 60529:	Circular connector: IP 65 / IP 67 Right-angle plug: IP 65
Pressure compensation:	Ventilation via electrical connection
Electrical connection	<ul style="list-style-type: none"> ■ Circular connector M12x1 (4 pin) ■ Right-angle plug per DIN EN 175 301-803-A (DIN 43650 model A)
Weight:	approx. 0.8 kg

Process connection

Design:	See order details
---------	-------------------

Material wetted parts

Diaphragm:	See order details
------------	-------------------

Hygienic design

The surface roughness of the wetted parts made of stainless steel are executed according to EHEDG Doc.8 and ASME BPE SF3.

In case of choosing the additional feature HY, we guarantee the following surface roughness values:

Diaphragm foil:	$R_a \leq 0.38 \mu\text{m}$
Laser welds:	$R_a \leq 0.76 \mu\text{m}$
Turned parts:	$R_a \leq 0.76 \mu\text{m}$

Further versions of hygienic design upon request.

Measuring system

Sensor:	Thin film sensor
System filling:	Synthetic oil FD1, free of silicone, FDA compliant

Nominal range

Nominal range [bar]	Standard measuring range* [bar]		Measuring spans		Over-load limits [bar]	Vacuum-tight < 50 °C
	min. [bar]	max. [bar]	min. [bar]	max. [bar]		
3	0..1 0...1.6 0...2.5	-1...0 -1...0.6 -1...1.5 -1...3	1	3	6	10 mbar abs
10	0..4 0...6 0...10	-1...5 -1...9	3	12	20	
50	0..16 0...25 0...40	-1...15	12.5	50	100	

* different measuring ranges upon request

Accuracy

General

Limit point setting:	per DIN 16086
Reference conditions:	per DIN EN 60770-1
Calibration position:	vertical mounting position
Accuracy: (Lin./Hyst./Rep.)	$\leq 0.5 \%$ of adjusted measuring range optional: $\leq 0.3 \%$ of adjusted measuring range
Long term drift:	$\leq 0.1 \%$ / year of nominal range
Temperature influence (transmitter):	$\leq 0.2 \%$ / 10 K of nominal range
Temperature influence (process connection):	Depending on the type of diaphragm seal Upon request we will provide a detailed error analysis.

Output

Signal:	4...20 mA (20...4 mA), 2-wire technology
Damping:	12 ms
Measuring rate:	80 Hz *
Current range:	3.7...22 mA
Resolution:	6 μA
Load, R_B :	$R_B \leq (U_V - 10V) / 0.022 \text{ A } [\Omega]$ $U_V = \text{supply voltage}$

* Other measuring rates upon request.

Supply voltage

Functional range:	10...32 V DC
-------------------	--------------

Temperature ranges

Temperature ranges for the design of the diaphragm seal system (in combination with the pressure transmission fluid FD1):

Ambient:	-10...50 °C
Media:	-10...140 °C

Adjusted design temperature ranges within the following maximum values are possible on request:

Ambient:	-40...85 °C
Media:	-10...140 °C *

* At a max. ambient temperature of 55 °C

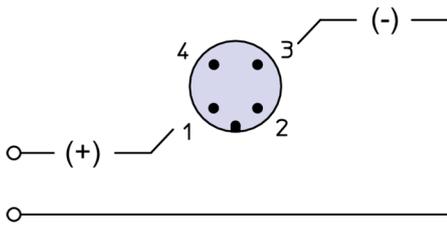

Storage:	-40...85 °C
----------	-------------

Tests and certificates

EMC :	Per EN 61326-2-3 : 2013-07, EN 61326-1 : 2013

Zero point correction

The zero point can be set easily with a magnet within $\pm 10\%$ of the nominal range.

To correct the zero point, hold a permanent magnet – a pin board magnet, for example – at the position marked on the pressure transmitter (i.e. the letter in a circle) within 30 to 120 seconds after the power has been switched on. To correct the zero point, atmospheric pressure has to be applied. Offsets for previously set values for lower range value and ultimate pressures will be corrected automatically by the device. A magnetic field applied out-side of this time period has no effect on the setting. The power must be switched off and on before the zero point can be set again.
